

My name is Marc Cooper and I'm a 23-year resident of Woodside Greens in Camarillo. I am concerned about the increase in jet and turboprop plane traffic at the Camarillo Airport because of its overall impact on quality of life in our otherwise, quiet community. The air traffic has already gone in few short years from the tolerable, occasional small plane or Lear jet during the day to more frequent, larger jets, sometimes in the middle of the night. The majority of us in Camarillo, do not have air-conditioning, due to the moderate climate, so noise and aircraft fuel pollution problems are magnified. As we are also in the flight zone for Point Mugu aircraft, we hear the deafening jet after-burners as they make their final approach in series. I think we all accept military air traffic as a necessary sacrifice for national security; however, we should not have to add to that for private jet interests. As a homeowner, I am concerned that my property value could soon fall, as a result of the predicted increase in air traffic.

So as a 23-year resident of the Woodside Greens neighborhood and a 33-year resident of east Camarillo, I ask you to please:

- Limit airport business growth (no more new hangars).
- Conduct an alternative flight plan, perhaps from the ocean side.
- Conduct an emissions/quality study now and for projected growth.
- Conduct noise study now and for projected growth.

Thanks,

*Marc*
